I. Introduction. Coronaviruses are a family of enveloped RNA viruses that are distributed widely among mammals and birds, causing principally respiratory or enteric diseases but in some cases neurologic illness or hepatitis (Lai and Holmes, 2001). Individual coronaviruses usually infect their hosts in a species-specific manner, and infections can be acute or persistent.

The biochemistry of our body stems from our awareness. Belief-reinforced awareness becomes our biochemistry. Each and every tiny cell in our body is perfectly and absolutely aware of our thoughts, feelings and of course, our beliefs. There is a beautiful saying 'Nobody grows old. When people stop growing, they become old'.

Much of the work conducted on adult stem cells has focused on mesenchymal stem cells (MSCs) found within the bone marrow stroma. Adipose tissue, like bone marrow, is derived from the embryonic mesenchyme and contains a stroma that is easily isolated. Preliminary studies have recently identified a putative stem cell population within the adipose stromal compartment. This cell population, termed ...
