Osmosis is the diffusion of water across a membrane in response to osmotic pressure caused by an imbalance of molecules on either side of the membrane. Osmoregulation is the process of maintenance of salt and water balance (osmotic balance) across membranes within the body's fluids, which are composed of water, plus electrolytes and non-electrolytes.

- All living things are made of organized parts, obtain energy from their surroundings, perform chemical reactions, change with time, respond to their environment, and reproduce.

Cell Biology ppt - SlideShare

This brief recapitulation of the origins of molecular biology reflects themes addressed by philosophers, such as reduction (see Section 3.1), the concept of the gene (see Section 2.3), and experimentation (see Section 3.4). For Schroedinger, biology was to be reduced to the more fundamental principles of physics, while Delbrueck instead ...
