Boiler - Wikipedia

The Yarrow boiler design is characterised by its use of straight water-tubes, without downcomers.

Circulation, both upwards and downwards, occurs within this same tube bank. Alfred Yarrow developed his boiler as a response to other water-tube designs, and his perception in

challenges faced in the mechanical design of steerable arthroscopic tools: 1. Size.

Restricted by the keyhole surgery setting and the confined space inside the knee joint, the size of the arthroscopic tools has to be made very small.
