This paper presents a probabilistic framework to derive the safety factors for fatigue of steel and composite steel concrete road bridges. Engineering models are used for the design and the safety factor is derived in such a way that the design meets the target reliability set by international Eurocode and ISO standards, estimated using measured data and advanced probabilistic models.

Provide digital services and tools to give people more control over their own health and the care they receive from the NHS; Extend to everyone the NHS App as a new digital 'front door' to give people secure digital access to their own medical records; find trusted information about their health online; allow patients to conveniently book appointments and view test results ...

### NHS Long Term Plan » Digital transformation

In computer science, program optimization, code optimization, or software optimization, is the process of modifying a software system to make some aspect of it work more efficiently or use fewer resources. In general, a computer program may be optimized so that it executes more rapidly, or to make it capable of operating with less memory storage or other resources, or draw less power.
